PRODUCTS  
AND LIFESTYLE

**The architects designers and programmers of materieunite** ("joint materials" in Italian) create permanent and temporary event and retail installations. The main material is sustainable cardboard and others are either recyclable or recovered from supply chain waste. The founding principle is circular economy: reduce, reuse and recycle. Materieunite has developed its own programming languages to produce tailor-made projects using as little material possible to minimize waste, in reduced timeframes and therefore at lesser expense. Each piece can be dismantled as easily as it was built, to facilitate full recycling at the end of its life. Key aims are to make sustainable design affordable and accessible to all, regardless of business size or operations, and to significantly reduce CO2 emissions linked to transport. The highly standardised final design can be produced in any location - ideally close to where it will be used - thereby reducing shipping and packaging emissions.

## Materieunite

ITALY TERNI

### SUSTAINABLE

Circularity  
Reversibility

### AESTHETICS

Redesigned space  
Made to measure

### INCLUSION

Affordable  
Shared know-how
